

“CEC” Council Headquarters -
Edinburgh

Year 2006

Frenger designed, manufacture and supply approximately 3½ kilometers of Multiservice Chilled Beams for the prestigious Council Headquarters in Edinburgh.

The building has adopted many of the most current “Green building” initiatives including Frenger’s latest-generation Carat radiant/convective cooling technology.

The Multiservice beams are finished in silver and have been supplied in single lengths up to 6.1m (the extremely lightweight nature of Carat has made this possible) with integrated direct and indirect lighting modules.
