

Gordon House - London

*we can't put air conditioning
into a listed building.
...you can now*

Year 2001/2002

The listed classification for the building coupled with minimal slab-to-slab height meant that this multi-storey speculative office development required a product that could deliver high levels of cooling with minimal fresh air volume. This was achieved by coating the cooling coils of multi-service chilled beams with our patented Drypac™ technology, enabling us to run below dew point and achieve 60% more cooling for the same volume of supply air.
