*floor-by-floor refurbishment
of a 1960's building...*

Year 2005

The brief for the refurbishment of this 1960's landmark building was simple; bring it in into the 21st Century, with an up-to-date heating, cooling, ventilation and lighting solution.

The application of Frenger's Polaris active multiservice chilled beams was the obvious solution due to the products ability to deliver high cooling and heating capacities with low air volumes. Additionally, Frenger's patented Drypac™ coating was used on the chilled beams to further enhance their performance.
