

**Walsgrave Acute,
Coventry**

Year 2003/2006

The re-development of Coventry's Walsgrave hospital was the largest PFI super-hospital of its day. The Atrium radiant heating panel has proved highly successful in healthcare environments; it's modular design and ease of installation meant that it was perfect for meeting the significant logistical challenge presented by this large project.

Though a programme of testing at the Company's climate facilities, Frenger was able to demonstrate to the Health Trust that the system will deliver comfortable environments in the most extreme conditions.
