Air Curtain

surface mounted

Surface Mounted Air Curtain

Fig 1. Surface mounted air curtain

Introduction

These surface mounted Air Curtains create an air barrier, which helps to prevent cold draughts thus creating a comfortable indoor climate. Energy losses through openings are reduced, which means considerable savings.

When the doors are closed, the Air Curtain will contribute towards the heating around the entrance area if required. The heated air from the unit will also help to dry any water/sleet dragged into an entrance, as such assisting in creating a safer environment.

Although Air Curtains emit warm air, the main purpose of an Air Curtain is not to provide general heating in a space. For more information with regard to general heating products, please contact our sales team for advice and information.

All Frenger Air Curtains are designed with energy efficiency in mind and with the introduction of Ecopower technology, end users can now benefit from energy saving and climate enhancing innovation.

The Air Curtains are available in two models; Model A is suitable for mounting up to 3m from floor level and Model B up to 4m.

Features

- Low sound levels
- Corrosion proof housing finished in RAL 9010
- Option of non-standard colours
- Optimized airflow technology
- Units can be mounted together to create longer runs
- IP21 Rated
- Available in electric, water or ambient versions
- Supplied tangential fans
- 3 way valve supplied with water units
- FRA model with optional filter on surface mounted water and ambient units
- FRA models includes low inertia high efficiency energy heating coils in electric heating units
- FRB models available with 82/71°C and 60/40°C low-grade water coils

Design

Finish

The Frenger surface mounted Air Curtain is designed for easy and discreet installation either with the included wall mounting brackets, or with drop rods (by others) from fixing points at the top of the heater.

The casing comprises of a sheet metal enclosure manufactured from decorative PVC coated 20G sheet steel with a perforated inlet grille and slot type discharge grille.

The decorative plastic end caps fitted to each end of the unit are push fit and do not require tools for removal.

The unit is finished in RAL9010 as standard, but other RAL colours can be accommodated upon request.

Technical Data

Ambient Air Curtain

*Output based on a Water Flow/Return Temperature of 82/71°C with an air entering temperature of 20°C

** Sound pressure levels (dBA) at 3m, as given in our brochure, are for a single air curtain mounted at its maximum mounting height, operating in a room with average acoustic characteristics as defined in CIBSE Guide B5 (reverberation time 0.7s) and a room size equivalent to 8 air changes per hour (ac/h). Care needs to be taken when selecting air curtains for an installation as noise levels can be several dB higher if the mounting height is reduced, if the room is more "live" (i.e. hard surfaces, no furnishings or absorbent materials), if the room is smaller than 8 ac/h equivalent or a combination of these factors. Noise levels will also increase if more than one air curtain is installed at the same doorway (e.g. + 3dBA for 2 equal point sources: direct field).

Mounting & Installation

Frenger Air Curtains Model A are designed for mounting over entry doors of heights from 2 up to 3m and Model B from 3 up to 4m from floor level. When deciding on the size of an Air Curtain it is vital that the Air Curtain covers the full width of the door for the optimum effect.

Fixing

The Frenger Air Curtain can be wall mounted using the included wall mounting brackets or be ceiling suspended using 4-6 x M6 (Model A) or 4-6 x M10 (Model B) rods (by others) which can be fixed in the threaded inserts at the top of the unit.

For detailed fixing instructions, please refer to our O&M manual.

Fig 2. Mounting bracket

Fig 3. Suspension rods (by others)

* Please note it is the sole responsibility of the installer to ensure that the building fixing points and suspension system used are suitable for the air curtain being installed.
